

Title: Authorised Access Points

Reason for Bulletin:

There has been an increase in Close Calls and an accident directly attributed to staff using the incorrect access, jumping over boundary fencing and leaving access gates open.

- You must use the authorised access point for your works which you will find in the Hazard directory in your SSOW packs.
- If you have any Issues with the access gate please report it to Network Rail control ASAP so that it can be rectified and to your supervisor/line manager and use an alternative one. Please **DO NOT** jump over the boundary fence line, as this will encourage others if seen to do the same.
- Please **CLOSE** the access gate after you have entered and the same when you leave the site. This will stop trespasser/children entering the Infrastructure and either damaging the infrastructure or suffering injury or a fatality.
- If it can be proved that you were the one who left the access gate open and someone gets injured or killed, **YOU** will be the one who will be going to court/ prison, please keep this in your mind in future.

Always

Never

Reminders of actions to be taken:

- Use the correct Access Point
- Report all access and egress problems ASAP
- Lock all access gates after entering and leaving site
- Never jump over boundary fencing

Always have a valid safe System of work in place before going on or near the line

Lifesaving Rules

activity unless you have been trained, assessed as competent and have the right equipment

Target audience: All staff/contractors on the ACJV

Please Display on Noticeboards & use for Briefing and Workbox Talks
