BRIEF OVERVIEW OF INCIDENT

At around midday track staff had been laying out equipment for activities to take place later in the day on an area of track ahead of the previous week's work. The teams had been instructed by their COSS to put a hand trolley on the Up road. At 19:05 the train, 6T11, was authorised to approach the marker boards at the London end of the worksite on the Up road. During this move 6T11 came into contact with the trolley. There were no injuries. The trolley had slight damage.

There had been a change of COSS and the later COSS had been made aware of the Train Movement but had not had any contact with the previous COSS.
