

Winter Consumables Catalogue 2013

Introduction

A winter catalogue has been developed which brings together all new and existing products to provide a 'one stop shop' for winter consumables.

Following feedback from front line staff, it was recognised there was not one document which brought together the details of all the winter consumables. After a review of all products, removal of any obsolete consumables, the winter catalogue was developed.

The winter catalogue contains:

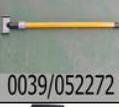

- Only products that are Network Rail approved (where required) for use on the network.
- Information for the intended use of each item and any limitations they may have
- Part numbers, costs and supplier lead times.
- Photos of each product for illustration purposes.

Some common products are duplicated by different suppliers to provide improved choice.

It is recommended that orders for winter supplies are made well in advance as previous experience has shown that late orders have overwhelmed suppliers and deliveries were delayed due to the wintry conditions.

**** Please Note**

Product Labelling contained in this catalogue may differ from delivered items and costs may change without notice. I-Store / I-Proc will contain current prices at the time of order.
